Prescripto AI 2.0 — Screenshots, Figures & Visual Assets Dossier

Document ID: `DOC-13-FIG`
Classification: Academic Engineering Dossier
Canonical Spec Reference: Workspace Visual Inventory
Date of Extraction: November 4, 2026

1. Visual Asset Catalog

This inventory documents all verified visual assets, automated test screenshots, sample prescription images, and architectural diagrams available in the repository:

Figure ID	Source File Path	Suggested Academic Report Figure Title	Report Chapter Placement	Content Description	Verified State
FIG-01	*Mermaid Diagram in DOC-04*	System Component & Tier Architecture	Chapter 3: System Architecture	Block diagram showing Client Tier, API Gateway, Managed PostgreSQL, S3, Worker Engine, and AI Models	Reconstructed from verified code
FIG-02	*Mermaid Diagram in DOC-04*	End-to-End Processing Sequence & Worker Lease Fencing	Chapter 4: System Workflow & Concurrency	Sequence diagram showing upload, `SKIP LOCKED` job claim, heartbeat renewal, stage execution, and review sign-off	Reconstructed from verified code
FIG-03	*Mermaid Diagram in DOC-06*	Complete Entity-Relationship (ER) Schema	Chapter 5: Database Design	Schema diagram showing relationships between `users`, `patients`, `documents`, `analyses`, `medications`, and `findings`	Reconstructed from verified models
FIG-04	User Uploaded Screenshot	Doctor & Staff Multilingual Login Interface	Chapter 6: Authentication & User Interface	Browser view of the authentication portal showing language selector (English, Hindi, Gujarati, Marathi) and demo autofill	Verified in deployed Vercel UI
FIG-05	`docs/test_screenshots/desktop_1280x800.png`	Clinician Dual-Pane Verification & Sign-off Workspace	Chapter 6: User Interface Implementation	Desktop viewport (1280×800) showing high-resolution scan on the left pane and structured confidence cards on the right	Verified in workspace repository
FIG-06	`docs/test_screenshots/mobile_360x640.png`	Patient Medication Portal with Voice Synthesis (Mobile View)	Chapter 6: Patient Accessibility & Voice UI	Mobile viewport (360×640) showing Medicine Hero Cards grouped by morning/afternoon/night schedules and audio listen buttons	Verified in workspace repository
FIG-07	`docs/test_screenshots/tablet_768x1024.png`	Clinical Review Queue on Tablet Viewport	Chapter 6: Responsive UI & Review Queue	Tablet viewport (768×1024) displaying review queue list, stage badges, and review requirement indicators	Verified in workspace repository
FIG-08	`sample_prescription.png`	Representative Handwritten Medical Prescription Scan	Chapter 7: Experimental Dataset & Perception	Sample handwritten medical prescription used for end-to-end integration testing and OCR verification	Verified in workspace root
FIG-09	`backend/tests/eval_set/synthetic_01_clean.png`	Baseline Clean Synthetic Prescription Benchmark	Chapter 8: Testing & Evaluation Benchmarks	Clean synthetic prescription with standardized typography used as ground-truth control benchmark	Verified in test suite
FIG-10	`backend/tests/eval_set/synthetic_02_blur.png`	Adversarial Blurry Prescription Benchmark	Chapter 8: Robustness & Adversarial Testing	Blurred synthetic prescription image used to evaluate the Stage 2 Laplacian variance quality gate	Verified in test suite
FIG-11	`backend/tests/eval_set/synthetic_07_diabetes_rot.png`	Rotated Prescription Scan	Chapter 8: Robustness & Adversarial Testing	Rotated synthetic diabetic prescription evaluating EXIF	Verified in test suite

Figure ID	Source File Path	Suggested Academic Report Figure Title	Report Chapter Placement	Content Description	Verified State
		Benchmark (90°)		orientation and angle invariance	
FIG-12	`backend/tests/eval_set/synthetic_10_multidrug_clean.png`	Multi-Drug Polypharmacy Safety Trap Benchmark	Chapter 8: Clinical Safety Evaluation	Synthetic multi-drug prescription containing intentional duplicate active ingredients and dosage traps	Verified in test suite

---

2. Textual Description of Core Visual Interfaces

2.1. The Clinician Dual-Pane Workspace (`FIG-05`)

The clinician review interface (AnalysisDetailPage.tsx) provides a split view designed for high-stress hospital environments: * **Left Canvas Pane:** Displays the prescription document retrieved via an ephemeral 60-second HMAC signed storage URL. Medical officers can pan, zoom up to 400%, and rotate the image to inspect faded ink strokes. * **Right Clinical Form Pane:** Each prescribed medication appears as an interactive card. Every field (`name` , `strength` , `dose` , `route` , `frequency` , `duration` , `instructions`) renders a color-coded status badge: * **Green Chip:** `CLEAR` (Calibrated confidence ≥ 0.85) * **Amber Chip:** `AMBIGUOUS` (Moderate confidence $0.50\text{--}0.84$; clinician verification required) * **Red Chip:** `UNREADABLE` (Stroke illegible; value masked) * **Gray Chip:** `NOT_PRESENT` (Field absent from document) * **Interactive Editing:** Clinicians can click any field to open EditMedicineModal.tsx, providing auto-complete suggestions from the local CDSCO formulary. * **Action Drawer:** Clinicians choose an immutable sign-off action: * `APPROVE` : Confirms all extractions and safety findings. * `FLAG` : Flags medication order for physician clarification with mandatory notes. * `ESCALATE` : Routes prescription to senior clinical pharmacy committee.

2.2. The Patient Medication Schedule & Spoken Voice Portal (`FIG-06`)

Designed specifically for semi-literate or elderly patients: * **Medicine Hero Cards:** Medicines are grouped visually by ingestion timing rather than alphabetical order: * 🌅 **Morning (सुबह / સવારે / सकाळी)** * 🌞 **Afternoon (दोपहर / બપોરે / दुपारी)** * 🌙 **Night (रात / રાત્રે / रात्री)** * ⚠️ **As Needed (SOS / जब ज़रूरत हो)** * **Dietary Chips:** Large high-contrast chips indicating "After Food" (भोजन के बाद) or "Before Food" (भोजन से पहले). * **Multilingual Web Speech Audio:** Patients tap the speaker icon (`Volume2`) to trigger browser-native speech synthesis in their preferred language (**English, Hindi, Gujarati, or Marathi**), converting complex medical text into natural vernacular instructions.
